ANNUAL REPORT

Our Year of Teamwork for Ecosystem

#yoleg

Our Vision.

"We envisage being a pioneering organization at the frontier of green initiatives and nature-based solutions for advancing sustainable livelihoods while conserving nature"

Our Mission.

Our objective is to promote sustainable livelihoods with green technology at the local, regional, national, and worldwide levels through research and youth-led initiatives. We influence policymakers' choices and promote the deployment of green technologies such as smart city development, smart energy, green consumption, waste management, and many more. We facilitate the implementation of natural-based solutions to address climate change while also contributing to sustainable development.

2021 ACTIVITIES

Ghana Wetlands Sustainability Conference Report 2022.

The "Ghana Wetlands Sustainability Conference" is a youth-focused wetlands engagement aimed at increasing student participation in the Ramsar Convention and SDG 15. The event is an outgrowth of Ghana's "Wetlands for Future Generation Campaign Program," which was launched to honor World Wetland Day each year. The inaugural event, held on February 16, 2021, was held at the University of Education, Winneba, Central Campus. Mr. Joseph Tsagli (Kasoa Area Director, EPA), Mrs Vivia A. Addo (Site Manager MPRS, WDFCG), Dr Ishmael Y. Dadson (Senior Lecturer, UEW), and Mr. Prosper K. Antwi spoke at the conference (Program Manager, A Rocha), who gave talks on the conference's theme, "Wetlands and Water-Inseparable Vitals of Life," the Current State of "the Muni-Pomadze Ramsar Site,"

"Addressing Conservational Approaches to Wetlands Sustainability in the Context of Ghanaian Society," and "Attitudinal and Behavioral Setbacks Towards the Sustainability of Wetlands in Ghana." 152 (72%) of the 210 individuals who registered for the conference showed up, including instructors, undergraduate and graduate students, and representatives from CSOs. In the aftermath of the COVID-19 epidemic, stringent adherence to COVID-precautions was enforced, and participants were educated to raise awareness of COVID's consequences in their communities. At the end of the conference, 10 volunteers were recruited to be mentored to engage in climate change initiatives on their campus.

Green Ghana Project.

Youth Legacy Ghana actively participated in the Green Ghana Day on its onset in 2021. This day is set aside to raise public awareness of forestation, from home to industrial levels.

Yoleg worked tirelessly with the Fforestry Comission Ghana's Wildlife Division in Winneba to plant around 5,000 seedlings in Ramsar locations. In this tree planting programme, 15 YOLEG student volunteers collaborated with several organisations.

Campus Group.

The campus group which has grown to this far as an organization is still operating. We currently have 12 volunteers all at level 200 in the Geography Department, UEW. The volunteers are given mentorship programs and offered platforms to speak, host and/or co-host at events. We also ushered one to work with forestry commission during long vacations. We are hoping to give them research guides and project development ideas to increase their resume standard.

Websites

In 2021 we renewed our website hosting by and domain to one more year. The website served as the main point of contacting the world within our sphere. Primarily, it was the platform for the registration of our various events. The website received a minimum of 150 visits a month and an overall 2,980 for the year 2021. Unfortunately, the website is down due to technical issues beyond our control.

Social Media Engagement

On social media, Youth Legacy Ghana thrives on Facebook, Twitter, LinkedIn, and Instagram in the year 2021 we amazingly increased our social media reach immensely. The figures below detail our progress by far. Moving forwards we envisage increasing reach, followers, and engagements by at least 20%.
